

Safety Belt for Simulation Systems

Software Protection Program

Secures the value of today's test system

The environment in which today's test cells are working is changing faster than ever. In order to allow for quick incorporation of new requirements the simulation systems that support the test cell must be kept up to date at all times.

Safety Belt achieves exactly this by providing the latest technology advancements that are driven by upcoming market requirements. Regular software upgrades will ensure the compatibility with the actual industry-standard operating system and will keep the down time for upgrading

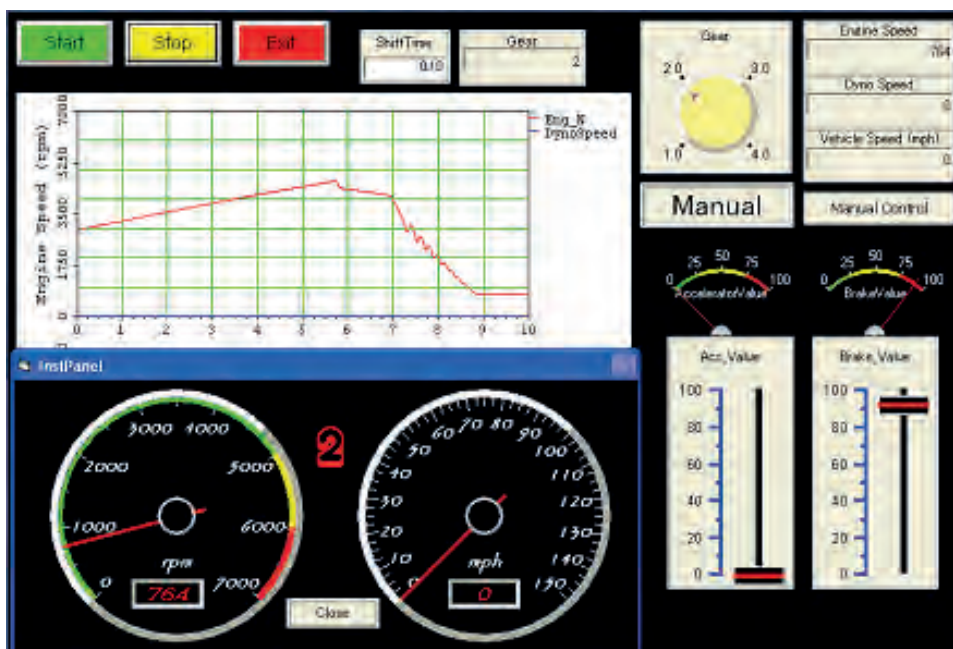

the system capabilities to a minimum.

A&D's Safety Belt secures the initial test system investment at a minimal yearly fixed cost.

The program also includes access to A&D's Help Desk for diagnostic and technical assistance, as well as to the Customer Portal. The portal is an online library containing the latest documentation, user guides, application notes and technical papers. It also provides easy access to the latest software updates and patches.

Benefits

- Secures investment dollars at a minimal yearly fixed cost
- Ensures the system is operating at the most up-to-date level
- Keeps the system compatible with the latest technology
- Minimizes downtime for required upgrades
- Customer Portal provides easy access to latest updates and documentation
- Reduced rates for Engineering Services and standard training classes
- Simulation systems supported
 - VirtualConsole
 - Add-on Packs (ExiCAN Pack, ASAM Pack)

A&D's Safety Belt for Simulation Systems software protection program ensures your system is up to date with the latest features and functionality available.

Safety Belt for Simulation Systems

Software Protection Program

Safety Belt for Simulation Systems Program Outline

Coverage	Updates for the licensed VirtualConsole software packages, as well as licensed add-ons.
Availability	Easy 24/7 online access to all released updates through A&D's Customer Portal.
Help Desk Support	Safety Belt for Simulation Systems includes 10 hours of Help Desk support.
Documentation	Easy 24/7 online access through A&D's Customer Portal to standard product documentation, application notes explaining new features, Tips and Tricks and technical notes with update instructions.
Training	20% discount on any A&D standard in-houses training class (www.aanddtech.com/training).
New Feature Implementation	Requests for future enhancements can be submitted through the Customer Portal. A&D will consider these requests throughout the release process. Each request will be evaluated and responded to in a timely fashion.
Engineering Services	Customer-specific and partial standard systems such as Andromeda and Flex Engine can be upgraded and extended with Engineering Services. Customers with Safety Belt coverage are entitled to reduced rates for these activities.
